DICTIONARIES

In Python

MOVING KEY-VALUE PAIRS

```
my_dict = { 'name' : 'John' , 'age' :  
25, 'city' : 'Pythonville' }  
my_dict.pop( 'age' )  
# Removes the key-value pair with  
key 'age'
```

MRD

A Dictionary of Similar Objects

```
# Creating a dictionary of programming languages and their release years
```

```
lang_dict = {'Python': 1991, 'Java': 1995,  
'JavaScript': 1995}
```

```
# Accessing the release year of Python
```

```
python_release_year = lang_dict['Python']
```

USING GET() TO ACCESS VALUES

```
my_dict = {'name': 'Jane', 'age': 30}
```

```
# Using get() to safely access the 'city' key with  
# a default value of 'Unknown'
```

```
user_city = my_dict.get('city', 'Unknown')
```
